Docker

Sign in

First, clone a repository

(1) Clone
(2) Build
(3) Run
(4) Share

The *Getting Started* project is a simple GitHub repository which contains everything you need to build an image and run it as a container.

Clone the repository by running Git in a container.

```
docker run --name repo alpine/git clone \
  https://github.com/docker/getting-started.git
docker cp repo:/git/getting-started/ .
```

You can also type the command directly in a command line interface.

Next Step

```
Windows PowerShell
